- Health Care Workers
- Pro-bono lawyers
- Paralegals
- Court Users Committee Members
- County governments
- County Governments of Kisumu and Homa Bay
- County Assemblies
- County Health Management Teams

Partnerships established through the DREAMS project

Key messages

PrEP and PEP are not the same. Both are important but used in different situations.

Pre-Exposure Prophylaxis (PrEP) means taking medication before being exposed to HIV to reduce the chances of being infected.

Post-Exposure Prophylaxis (PEP) means taking medication after being exposed to HIV. It prevents someone from being infected.
